

LIBRARY PROGRAM

This program manages a library inventory that allows users to borrow and return books from the library.

ALGORITHM

1. Start
2. User inputs the book name to borrow or return
3. In case of borrow, it will check in Library class, and removes that book from library, and gives that book to user.
4. In case of return, it will add that book to the library.
5. Prints for whatever action performed, i.e., borrowing or returning.
6. Also prints the updated list of books in library.
7. Stops
