

| Sr No | Use Case          | Test Case (TC)                        | Test Data               | Test Result Expected                               | Test Result Actual                                       | Result / Decision | Priority (Scope Basis)         | Score |
|-------|-------------------|---------------------------------------|-------------------------|----------------------------------------------------|----------------------------------------------------------|-------------------|--------------------------------|-------|
| 1     | Pressure Build up | Cooker builds pressure normally       | Water + Heat            | Pressure should build safely                       | Pressure built safely                                    | Pass              | Basic Functionality (Positive) | 10    |
| 2     | Safety Valve      | Safety valve releases excess pressure | Overheating             | Safety valve should release pressure               | Safety valve released pressure                           | Pass              | Basic Functionality (Positive) | 10    |
| 3     | Lid Lock Safety   | Lid should not open under pressure    | High pressure           | Lid should remain locked                           | Lid remained locked                                      | Pass              | Safety (Negative)              | 8     |
| 4     | No Water Safety   | Cooker used without water             | Empty cooker            | Cooker should not operate and show warning         | Abnormal heating observed, no warning displayed          | Fail              | Safety (Negative)              | 8     |
| 5     | Gasket Seal       | Check gasket sealing condition        | Proper / Damaged gasket | No leakage with proper gasket / leakage if damaged | No leakage with proper gasket / leakage with damaged one | Pass              | Both Positive & Negative       | 9     |
