

1. Download Android Studio

1. Open: <https://developer.android.com/studio>
2. Download **Windows Installer (.exe)**

2. Install Android Studio

1. Right-click the downloaded installer → **Run as administrator**
2. Click **Next** → **Next** → **Install**
3. Wait for installation to complete → Click **Finish**

3. Open Environment Variables

1. Right-click **This PC** → **Properties**
2. Click **Advanced system settings**
3. Click **Environment Variables**

4. Create ANDROID_HOME

1. Click **New** under **System variables**
2. Variable Name: **ANDROID_HOME**
3. Variable Value: **C:\Users\deepa\AppData\Local\Android\Sdk**
4. Click **OK**

5. Update Path

1. Select **Path** → Click **Edit**
2. Add:
 - C:\Users\deepa\AppData\Local\Android\Sdk\platform-tools
 - %ANDROID_HOME%\build-tools
 - %ANDROID_HOME%\platforms
3. Click **OK** → **OK**

6. Configure SDK in Android Studio

1. Open **Android Studio**
2. Go to **Tools** → **SDK Manager**
3. In **SDK Platforms** → Check **Android 13**
4. In **SDK Tools** → Check **Command Line Tools**

5. Click **Apply** → **OK** → **Finish**
6. Close Android Studio

7. Verify Installation

1. Open **Command Prompt**

Run:

```
adb version
```

2. Confirm adb (Android Debug Bridge) version is displayed
